

Saving Money with Pharmacychecker.com

Using the website is straightforward. You can browse an alphabetical list of medications or search by name. If you are unsure of the spelling the autosuggest search box makes it easy to find a medication, just enter the first few letters. Once you select your medication and the strength (e.g. 25 mg) click on the link to view prices. You will get a list of pharmacies and any relevant prescription discount cards. Select the "GO" link to verify the price with the pharmacy's website. Click on the "Details" link for an information profile of the online pharmacy. You can also setup a price alert on any medication to receive regularly scheduled price comparisons in your inbox.
